

REQUIREMENTS FOR COLLOQUIUM OF PHARMACOGNOSY

The students should present a notebook/folder containing 70 phytopharmaceutical products from different biological active groups. The information structure for each phytoproduct should be as follows:

- trade name;
- dosage forms (tea, ointment, gel, suppositories, granules, tablets, capsules, oral solutions, injectable solutions, infusion solutions, drops, etc.);
- type of product or products included in the dosage form (tincture, extract, pure substance, semi-synthetic substance, combined product);
- botanical source (Latin name of the plant, plant family) and the herbal drugs from which the product was obtained;
- chemical composition - the main active substance / substances that determine the therapeutic effect of the phytoproduct;
- chemical structure of the active substance / substances;
- a summary of the pharmacological action;
- indications for therapeutic use;
- other medicinal products of the same plant or drug.

These data on medicinal phytoproducts should be systematized in a notebook / folder which the students present on the colloquium at the Department of Pharmacognosy and Pharmaceutical Chemistry to certify the internship.
