

## TEST Medicine 1

- In the area of damage, the first to be sorted are:
  - The dangerous
  - T1
  - The ones standing closest
  - T3
- After opening the airways, the next step of first aid is to check for:
  - Pulse
  - Breathing
  - Foreign bodies in the airways
  - Bleeding
- What is the first action of the leader of the medical team during disaster medical support if his team is the first on the spot?
  - To introduce himself and the capabilities of his team to the incident commander
  - To undertake medical intelligence
  - To report to the Medical support manager
  - To introduce himself and the capabilities of his team to the Medical support manager
- What is the risk level when all risk factors are present and the implementation of preventive measures could decrease the risk level?
  - Threat
  - Low
  - High
  - Extremely high
- How many are the main elements of the National Management System:
  - 4
  - 5
  - 6
  - 7
- How many groups are the medical losses depending on the damaging factor?
  - 8
  - 7
  - 6
  - 5
- Which is the first step of the medical intelligence?
  - Collecting medical data
  - Collecting medical information
  - Receiving directives and guidance
  - Confirming the authenticity of the signal
- The excision of devitalized tissues is:
  - First physician aid
  - First pre-physician aid
  - Specialized physician aid
  - Qualified physician aid
- Based on how many criteria, the primary medical triage is performed?
  - 3
  - 4
  - 5
  - 6
- Casualty with closed lower leg fracture and preserved vital signs is triaged primarily as:
  - T1
  - T2
  - T3
  - T4
- In first aid, by touching or gently shaking the shoulders of the casualty, we check for:
  - Trauma
  - Cardiac activity
  - Vital signs
  - Consciousness
- Search and rescue teams perform:
  - Organized evacuation
  - Directed evacuation
  - Medical evacuation
  - Spontaneous evacuation
- The forward medical station is established in the area of damage in:
  - Nuclear accident
  - Flood
  - Terrorist attack
  - War

14. Casualty who is unconscious and is restoring the breathing after opening the air ways is primary triaged as:

- A. T1
- B. T2
- C. T3
- D. T4

15. Where the primary medical triage is performed:

- A. In the area of damage
- B. In front of the forward medical station
- C. In front of the hospital
- D. All of the above
